Sin Seng Huat International was founded during the 50’s in Singapore as the stockist for Hardware to serve the maritime with Singapore as the central hub for logistic distribution.

MEP systems, was founded in 1998 as a family company to provide Deck machineries solutions for the marine and offshore industry.

Sin Seng Huat Foshan was established in 2000 in southern China as the Manufacturing plant for MEP range of Deck Machineries.

Sin Seng Huat Qidong was established in 2010 in Nantong to increase the manufacturing capabilities for MEP range of deck equipment. Since the beginning it stood out because of its skills and care in design, engineering and fabrication in Marine & Offshore, Oil & Gas.
Sin Seng Huat (Qidong) Marine Equipment Co., Ltd

- Fully paid Share Capital: 10 millions USD
- Occupy 67000 m² of land.
- Up to 600 Ton of load testing facility
- Email: info@sinsenghuatqd.com
- http://www.sinsenghuat.com
- Certified Quality System according to EN ISO 9001:2008
- Certified Welding System according to ABS, DNV, CCS, BV, LR Classification Society

Why choose us as your provider?

1. Because our Equipment are RELIABLE
   Reliability is the ability of a machine or a system to consistently perform its intended or required function on demand and without degradation or failure. To make a “Reliable Equipment” we integrate design concepts with on-board feedbacks and operational results being sure that the past “problems” are capitalized as “experience” into New Projects.

2. Because we provide INTEGRATED SOLUTIONS
   In addition to the proposal of Equipment as per Client Technical Spec, our attitude is to look to the entire System rather than to the Single Equipment and to propose an Integrated Solution which takes into account design criteria + operating feedbacks from experiences done on board of vessels.

3. Because we are your R&D Dept.
   In our character there is the attitude to study the best technical solution with innovative design together with field proven technologies and, where a new system is done, we perform Laboratory and Factory Tests (FAT) to validate the expected performances.
