ZINC ANODES (GALVION TYPE)
Anode assembly includes brass retaining plug and replaceable zinc elements. The first element screws directly into the plug, and each additional element screws into the one preceding it.

* Zinc can be cut to shorter lengths with hacksaw, or ordered to other lengths or thread sizes.

LONG LARGE ZINC ROD for longer effective life. Contains up to 200% more zinc - up to 3 times as many amperes-hours of maximum corrosion protection.

REINFORCING WIRE or ROD extending into the plug holds the last ounce of zinc in place until consumed. Pieces won’t drop off to foul pipes and equipment.

ANODE QUALITY ZINC: 99.99% pure zinc to which fractional percentages of alloying elements are added to achieve optimum composition and grain structure for corrosion control.

TIGHT FIT of zinc rod to brass plug.

HEX BRASS PIPE PLUG
Heavy duty type.
