

ATLAS[®]-FLOAT

SPECIFIC PROPERTIES FLOATING

high breaking load

good elongation

best spooling on winches

easy handling

design:

6 strand with filling thread

type of lay:

cross

density:

0,99 - floating

The ATLAS[®]-Float

is floating

has optimized elongation characteristics

offers high dynamic load resistance

is very compact and dimensionally stable

has very good abrasion resistance

achieves very high fatigue strength under reversed bending

can be stowed while wet

is designed for use on automatic winches

Ø mm	rope weight kg/m	kalk. MBL kN
48	1,40	434
52	1,59	504
56	1,85	580
