DIESEL FUEL INJECTION SERVICE, SUPPLIER, MANUFACTURER

FUEL INJECTOR WHICH NEEDS REPAIR GRINDING - LAPPING

FUEL INJECTOR AFTER GRINDING & LAPPING

The fuel injectors with damaged surface or wear in the middle of the surface create the problems below:

1. The nozzle does not spray, even if it's new or slightly used.
2. Will cause a higher needle lift for the fuel injection nozzle, the higher needle lift is lowering the service life of the nozzle and sprays - delivery twice amount of the regular condition

At your disposal for any information.

Thanks & Kindest Regards,
A. Makarian Co
