

CAPITAL BEDDING

MARINE BUNK BEDS

Steel bunks are available in double or single options with heavy duty spring decks supported by double pin and hook connections on square tube ladder ends

Aluminum bunks feature the weight savings required in many accommodation projects. Drawer placement, locks, privacy panels, ladders and guard rails are considerations for the bunk buyer.

**Premium Bunk Beds**

Heavy duty applications require proven bunk designs on open water vessels. Made from high-strength steel square tube, welded and powder-coated frames, our bunks support two workers in ample space provided by 40" wide berths and plenty of headroom between bunks. At 80 inches long, even the taller individuals sleep well. Storage is adjustable to room layouts with lockable drawers and pdf compartment. Ladders and guard rails are also adjustable along the smooth stainless-steel rails. Ends are available in ladder type or closed for privacy. Optional convenience shelving and USB charging stations make our bunks like home. Bunks made of aluminum are also available.

Heavy-Duty Bunk

Our finest heavy-duty bunk with panels constructed of 20-gauge cold-rolled furniture steel. This unit is very popular due to its easy assembly and the ability to convert from stackable, double bunk to single beds (with optional conversion kit). Rigidity is assured through the use of double-throated hooks to lock the dura-flex springs into place.

Overall widths: 36 - 1/8"

Overall length: 79"

Distance from floor to bottom spring: 14 - 3/8"

Distance between springs: 34"

Overall height: 62 - 3/8"
