CONVERSION

SVS Ship Repair is ideally placed to provide a professional and cost-effective solutions when vessels need to be retrofitted or converted for use in alternative applications.

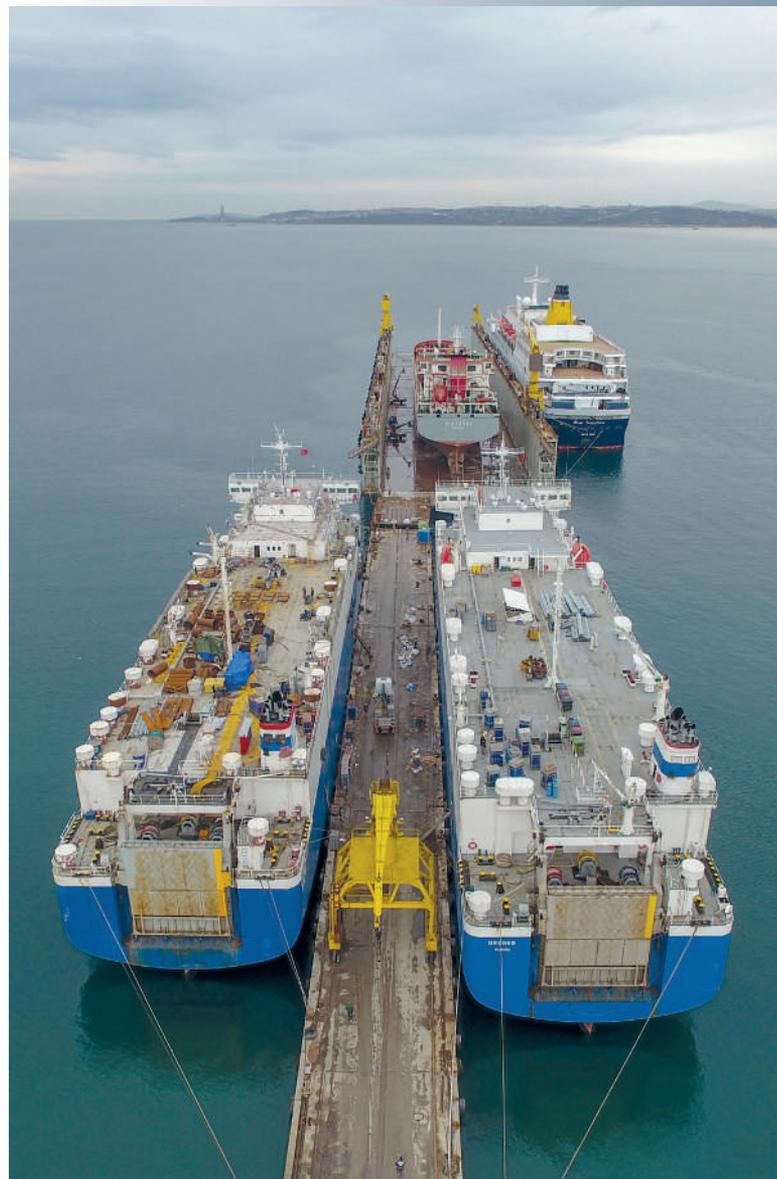

Our in-house expertise allow us to complete the most ambitious ship retrofit contracts from installing new units to full scale conversions.

We also have the know-how and manufacturing technology to provide the complete end-to-end ship retrofit service and can work in partnership with clients from concept formulation and design to completing and commissioning.

Our experience in this field, among other projects, includes the conversion of following projects respectively;

Customer: Nabolsi Group
Vessel: Freesia
IMO: 9046368
Loa: 99,92 mtrs
Main Goal: Conversion of Car Carrier into Livestock Carrier

Customer: Nabolsi Group
Vessel: Orchid
IMO: 9174763
Loa: 99,92 mtrs
Main Goal: Conversion of Car Carrier into Livestock Carrier

BWTS RETROFITS

Over the years, environmental questions have been one of the major focus of the international maritime organization (IMO) conventions.

Following these conventions, we are well-familiar with the present BWTS technologies and we have worked with different treatment systems from different market leading manufacturers.

Commencing the journey from 3D scanning design & engineering, we handle the BWTS prefabrications prior vessel's yard arrival to optimise the shipyard duration period. Followed by installation of system and all relevant items in dedicated areas within the most reasonable time frame.
