

VIKING LIFE-SAVING EQUIPMENT, INC.

Marine Evacuation Slide (VES)

This evacuation slide system combines high capacity with flexibility.

The angle of the slide allows for installation in extreme fore and aft positions on board ship, yet avoids critical areas when deployed. Additional liferafts can be positioned almost anywhere on board and remotely released when needed.

The slide can also be used as means of rescue. Grab lines along the length of the slide allow evacuees to pull themselves up from the water and board the ship. Specially designed stretchers are available for rescuing persons who are unable to pull themselves up with the grab lines.

System features:

- Evacuates 500 people within 30 minutes or at least 300 within 17 min. 40 sec.
- Installation heights between 6 and 15 metres
- Extremely stable, even in very rough seas
- Simple to operate and requires few crew members
- Flexible installation and capacity
- Complies with all international regulations
- Can be used with a wide range of different liferaft types

Evacuation Dual Chute (VEDC)

The Evacuation Dual Chute is designed specifically for high capacity, high sided vessels.

The evacuation dual chute, or VEDC, is combined with 150-person high capacity liferafts for safe, rapid evacuation from large passenger vessels. This arrangement combines the highest evacuation capacity with discreet, compact and self-contained design for maximum safety and relatively little deck disruption.

System features:

- Evacuates 736 people in 30 minutes
- Reinforced Kevlar® chute protects against the elements
- Embarkation heights between 10 and 18 metres
- Easy to deploy
- Requires few crew to operate and little specialized training
- Available with 2 high capacity 150-person liferafts
- Supplied with either SOLAS emergency pack A or B
- Complies with all major international regulations

Evacuation Liferaft System + SOLAS MiniSlide (VELS + SMS)

The VELS + SMS has added safety features and more flexible storage options.

The system liferafts can be stored in racks separately from the slide and released by remote release when needed. The slide is packed in a valise and can be stored in a vessel convenient location. It has a unique descent safety brake cushion at the interface to the liferaft and extra high sides for increased safety.

Special features:

- Evacuates 501 people in 30 minutes or 303 people in 17 min. 40 sec. (HSC)
- Installation heights between 1.5 and 3.7 metres
- Can be operated by a single crew member
- Available with canopied self-righting or open reversible liferaft
- Special evacuee descent brake cushion for additional safety
- Single bowing winch technology for faster, easier bowing
- Complies with all international regulations
