

UltraPad

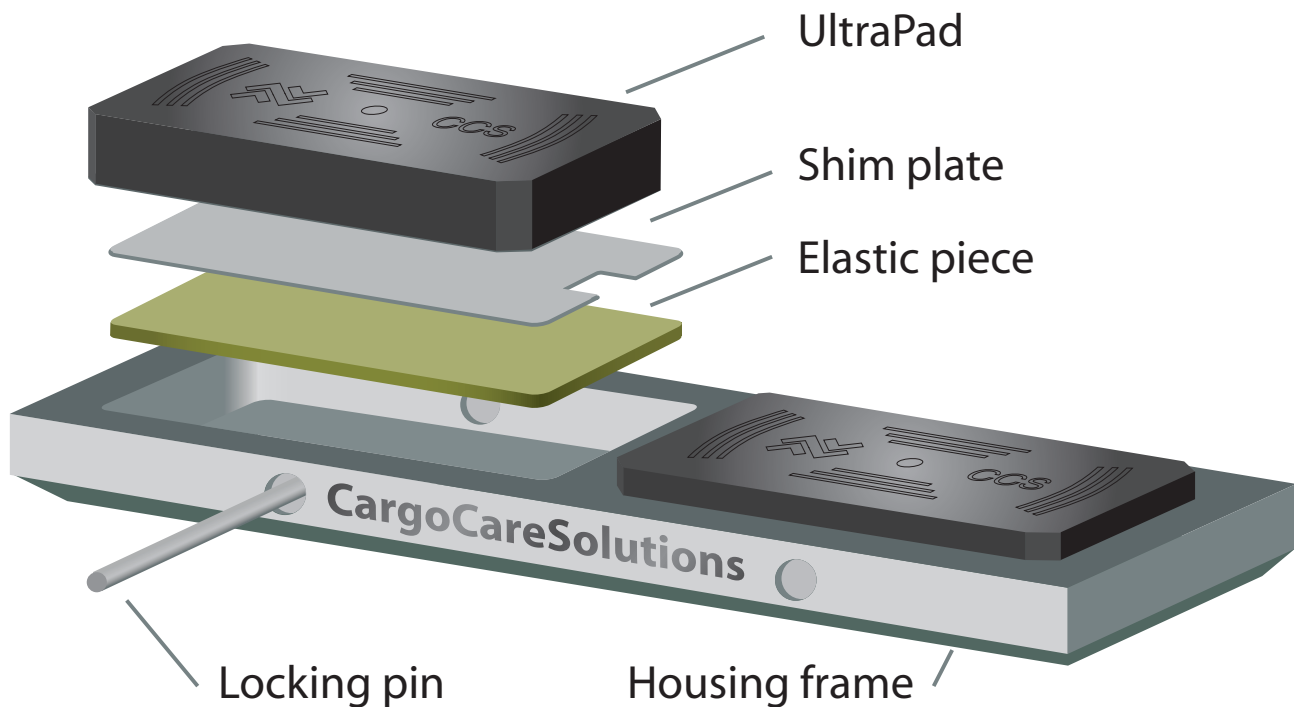

Low wear hatch cover support pads

CargoCare
Solutions

ONE SOLUTION FOR YOUR ENTIRE FLEET

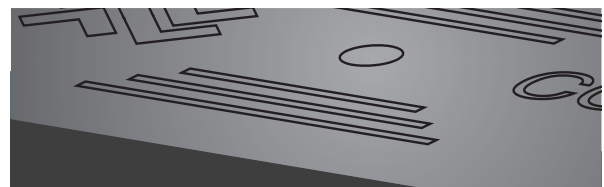

**Introducing the UltraPad. With the lowest wear on the market today.
Improved locking pin. Multiple sizes. Excellent sliding.**

Support pads are a critical area which can lead to high ship maintenance costs during service life. The UltraPad offers the lowest wear rate available on the market today, improving support pad lifetime, lowering hatch cover maintenance costs. We offer the UltraPad in multiple sizes for different makers being able to offer you one solution for your entire fleet. The UltraPad can be used as replacement for traditional Bronze Teflon type support pads. We offer tailor made programs helping you find the best solution possible to keep your hatch covers in top shape.

Our improved locking pin provides better securing of the UltraPad compared to pins with a standard thread. The head of the locking pin ensures better grip making mounting of the UltraPad faster.

Easy wear detection by prefabricated grooves of 1mm, 2mm and 3mm deep. Based on positions where pads wear down most.
