

## VPS VOICE POWERED SYSTEM For Fail-Safe Communications

VPS Telephone

VPS Telephone in Watertight Enclosure

### Features:

- Virtually Indestructible, Flame Retardant
- Operates in Extreme Conditions
- Operates Continuously With No Maintenance
- Operates Without Batteries or External Power Source
- No Software Required
- Meets or Exceeds Title 46, CFR, Subpart 113.30-3(b)

The VPS System provides reliable, failsafe voice communication between occupants and first responders when it is needed most.

Voice powered telephones are designed to provide communications without the use of batteries or other outside sources of current. The United States Coast Guard considers them to be the most failsafe method of communication and supports their mandatory presence on all marine vessels.

The VPS System is designed to save lives by ensuring that communications will not be interrupted in an emergency situation, even under the most hazardous and extreme conditions at sea.

### VPS Models Available with 8, 12, 19 or 24 Station Selection:

- VPS** Standard wall mount station, flame retardant housing, piezo signaling device
- VPS-F** Standard flush mount station, flame retardant housing, piezo signaling device
