

Behrens Pumpen

We move water in perfection.

A VIEW ASTERN – CONTINUOUS DEVELOPMENT

Behrens Pumpen was founded in 1948 by Heinrich Behrens. Through his expert knowledge, the company became a specialist in centrifugal pumps for ships and we continue to maintain our reputation for quality with our own machining and manufacturing.

As a family owned company in Bremen, we are strongly connected to these roots and proud of our modern factory. We are committed to accurate inspection and testing and our cooperation with all classification societies is an assurance of our continued quality.

OUR FLEET – FOR YOUR FLEET

Whether cooling-water or general service pump, ballast or fire fighting pump – with our products everything functions as intended. Every pump system is customized for the designated operation environment and the materials are optimized for the pumped medium. A pumping capacity of more than 4000 m³/h is possible.

Keeping watch – Night and day

Everything runs efficiently. This is also true for the delivery of original or spare parts. With Behrens you are in safe hands - and we are quickly on site. Our modern EDP-system is specially designed for the maritime requirements. This provides a quick overview of the ships name, IMO-number and all data regarding the pumps on board.
