

# INDUSTRIAL PUMP REPAIRS

## WHO WE ARE

For almost 50 years, US Marine has been repairing and overhauling all types of pumps and associated products. During this time, the business has built a reputation for delivering exceptional quality and outstanding customer service. Products have been delivered to ship operators and ship management companies all over the world.

---

Over the years, we have developed processes and techniques which have enabled us to repair and overhaul expensive equipment which might otherwise have been scrapped.

---

Some of these processes have also ensured that many of our repaired units are often more efficient and robust than the original product.

---

In the last 10 years, we have also introduced an ever increasing range of spare parts for most types of pumps, motors and fans. These parts are manufactured to exacting standards and are normally available within short lead times.

# A ONE STOP SHOP

## WHAT WE DO

Since the recent merger with the Westin Group, we now have an increased range of new and repaired products and spares. This includes motors, gear boxes, compressors, fans, servos, automation along with a vast range of spare parts. Some of the brands we offer are WEG, Lenze, Brook Crompton and Sprint.

---

All repair and overhaul work is done in a new, custom built and well equipped workshop. The workshop has a 20 tonne lifting capacity, so no product is too big.

---

Component parts for repair work and spares are all manufactured in our precision engineering workshop, which is equipped with manual machines for bespoke items and state of the art CNC machining centres for batch work.

---

All of our engineers and technicians are fully trained and regularly attend refresher courses and new technology courses. The workshops are accredited to ISO9001.
