

## FIRE NOZZLES

**A** – 3-position nozzle. Rubber bumper can be twisted from shut-off position to a choice of straight stream or fog spray. Coupling adapter is threaded into the nozzle body to permit interchanging male adapter.

**B** – 3-position unifire nozzle. Rubber bumper can be twisted from shut-off position to a choice of straight stream or fog spray. Coupling adapter is threaded into the nozzle body to permit interchanging male adapter to midsection of nozzle.

**C** – 3-position unifire nozzle. Rubber bumper can be twisted from shut-off position to a choice of straight stream or fog spray. Coupling adapter is threaded into the nozzle body to permit interchanging male adapter to midsection of nozzle.

**D** – 3-position nozzle with handle. Lever can be moved from shut-off position to a choice of straight stream or fog spray. When lever is in fog position, spray is adjusted by twisting the heavy rubber bumper. Coupling adapter is threaded into the nozzle body to permit interchanging male adapter.

**E** – Jet nozzle. Tips are designed to provide a straight stream flow with tip diameters of 13mm for 1-1/2" nozzles, 15mm for 2", and 20mm for 2-1/2".

*Note: Nozzles are shown with Nakajima adapters. All nozzles and hose valves shown are available with any of five coupling adapters (shown below). Specify by kit number.*
