

OUR EXPERIENCE TO YOUR SERVICE

For today & tomorrow solutions we are always available

ABOUT US

Disassembling, cleaning and reassembling a turbocharger may seem like an easy task to someone with some mechanical knowledge, but this is not the case. In order to do it, one needs to master the fundamental rules of mechanics, knowledge based on training and refresher courses, years of field experience and, most of all, a well-equipped workshop.

LMTD IS ALL OF THIS.

The constant commitment and care for detail in all the company's sectors allows us to offer high quality services and products. Thanks to the implementation of the RINA ISO 9001:2008 certification we are equipped with an efficient quality system, which helps us not to overlook any detail. Being a medium sized company, independent on the national and international market, we can be flexible to address our clients' more and more demanding requests. We offer quick and precise solutions, competitive commercial conditions and the security of an efficient technical assistance.

"The quality of our work is our passion.

OTHER PRODUCERS

As a former authorised service station, **LMTD Srl** grants support for the turbochargers produced by **MAN** and **PBS Turbo**, based on its personnel's multi-year and qualified experience and on the employment of original spare parts.

LMTD also possesses a long-standing experience with the following turbochargers:

NAPIER	ABB
BCC	HOLSET
IHI	HSM
ELLIOT	MAYBACH
ALCO	HISPANO SUIZA
KKK	GARRETT
SCHWITZER	

After many requests from our clients, we are now set up for the inspection of turbo pumps manufactured by

MAPRO – SAVIO – COMBIMAC - CONTINENTAL

Thanks to our commitment and knowledge of our staff and to the reliability of our services and products, we were able, with time, to gain and establish our clients' trust and respect.

The fact that we have represented leading producers on a worldwide basis for several years is a proof of our professionalism.

EQUIPMENT

Our policy consists of the continuous education of the workforce to develop the best use of the tools and of the measuring instruments.

In our workshop, the following tools are available:

- TIG welding equipment
- Laser welding equipment
- Lathe
- Numerical control processing centre
- CEMB Industrial Balancer
- Automotive Turbine Balancer
- FARO laser arm
- Boring bar
- Milling machines
- Pillar drills
- Measuring instrument
- Numerical control saw
- Portable vibration measuring instrument
- Portable turbine balancing instrument
- Portable device to measure the referred average power of internal combustion engines.
- Ultrasound thickness measuring devices
- Devices for the reconditioning of bearing kits
- Devices for the reconditioning of turbo blowers oil pumps
- Sandblasters
- Washing point with non-toxic product
