NFPA Servus® insulated black rubber Boots

MODEL FHR200 FOAM FIRE FIGHTING STATION

The FHR200 is USCG approved and designed for marine and offshore applications. It mixes water with 3% AFFF foam concentrate to generate a fire-fighting foam spray in fixed locations to control fires or spills of flammable or combustible liquids.

WHEELED FIRE EXTINGUISHERS

Available with three choices in dry chemical agents to suit specific fire protection needs:

- Monoammonium Phosphate (ABC)
- Sodium Bicarbonate (Standard)
- Potassium Bicarbonate (Purple K)

Designed for one-man operation. Easily transported through doorways and over rough surfaces. All models are also available as stationary units. Every model is rechargeable. Rugged steel cylinders and frames with baked-on polyester enamel coatings stand up to harsh environments. Manufactured to ANSI/UL 299 and ANSI/UL 711 Standards. Plated brass cylinder valves and hose valve assemblies. All pressurized cylinders are DOT approved.
