

“The Adaptability to Cope with New Techniques”

At Young and Cunningham, valve manifolds are an area of valve design in which we have specialised, developing our understanding and production abilities over many years.

As shown in the images contained in this catalogue, our range and capacity to produce bespoke arrangements in this type of fitting are only limited by the need for such manifolds.

As with all valves we produce, the unique feature of our products is that we can manufacture to suit pipe configuration and also offer a standard sizing if pipe configuration is not a factor. This allows us to introduce a space saving solution to suit any application.

Our bore sizes range from 15mm (1/2") to 200mm (8") with any number of branch combinations to suit.

Materials

Bodies

<i>Cast iron</i>	BS1452 grade 14	Equivalent ASTM 126 Class A
<i>S.G. (Nodular) Iron</i>	BS2789 SNG 27/12	Equivalent ASTM A395-1977
<i>Gunmetal (Bronze)</i>	BS1400 LG2 and 4	Equivalent ASTM B62
<i>Stainless Steel</i>	EN58J	Equivalent AISI 316

Trim

<i>Gunmetal (Bronze)</i>	BS1400 LG2 and 4	Equivalent ASTM B62
<i>Stainless Steel</i>	EN58J	Equivalent AISI 316

Strainers and Mudboxes

To compliment our manifold range we also apply our design knowledge to a complete range of strainers and mud boxes which range in the same materials and trims, these can also be made to measure and bespoke arrangements are available on request with sizes up to 600mm (24").

Flanges

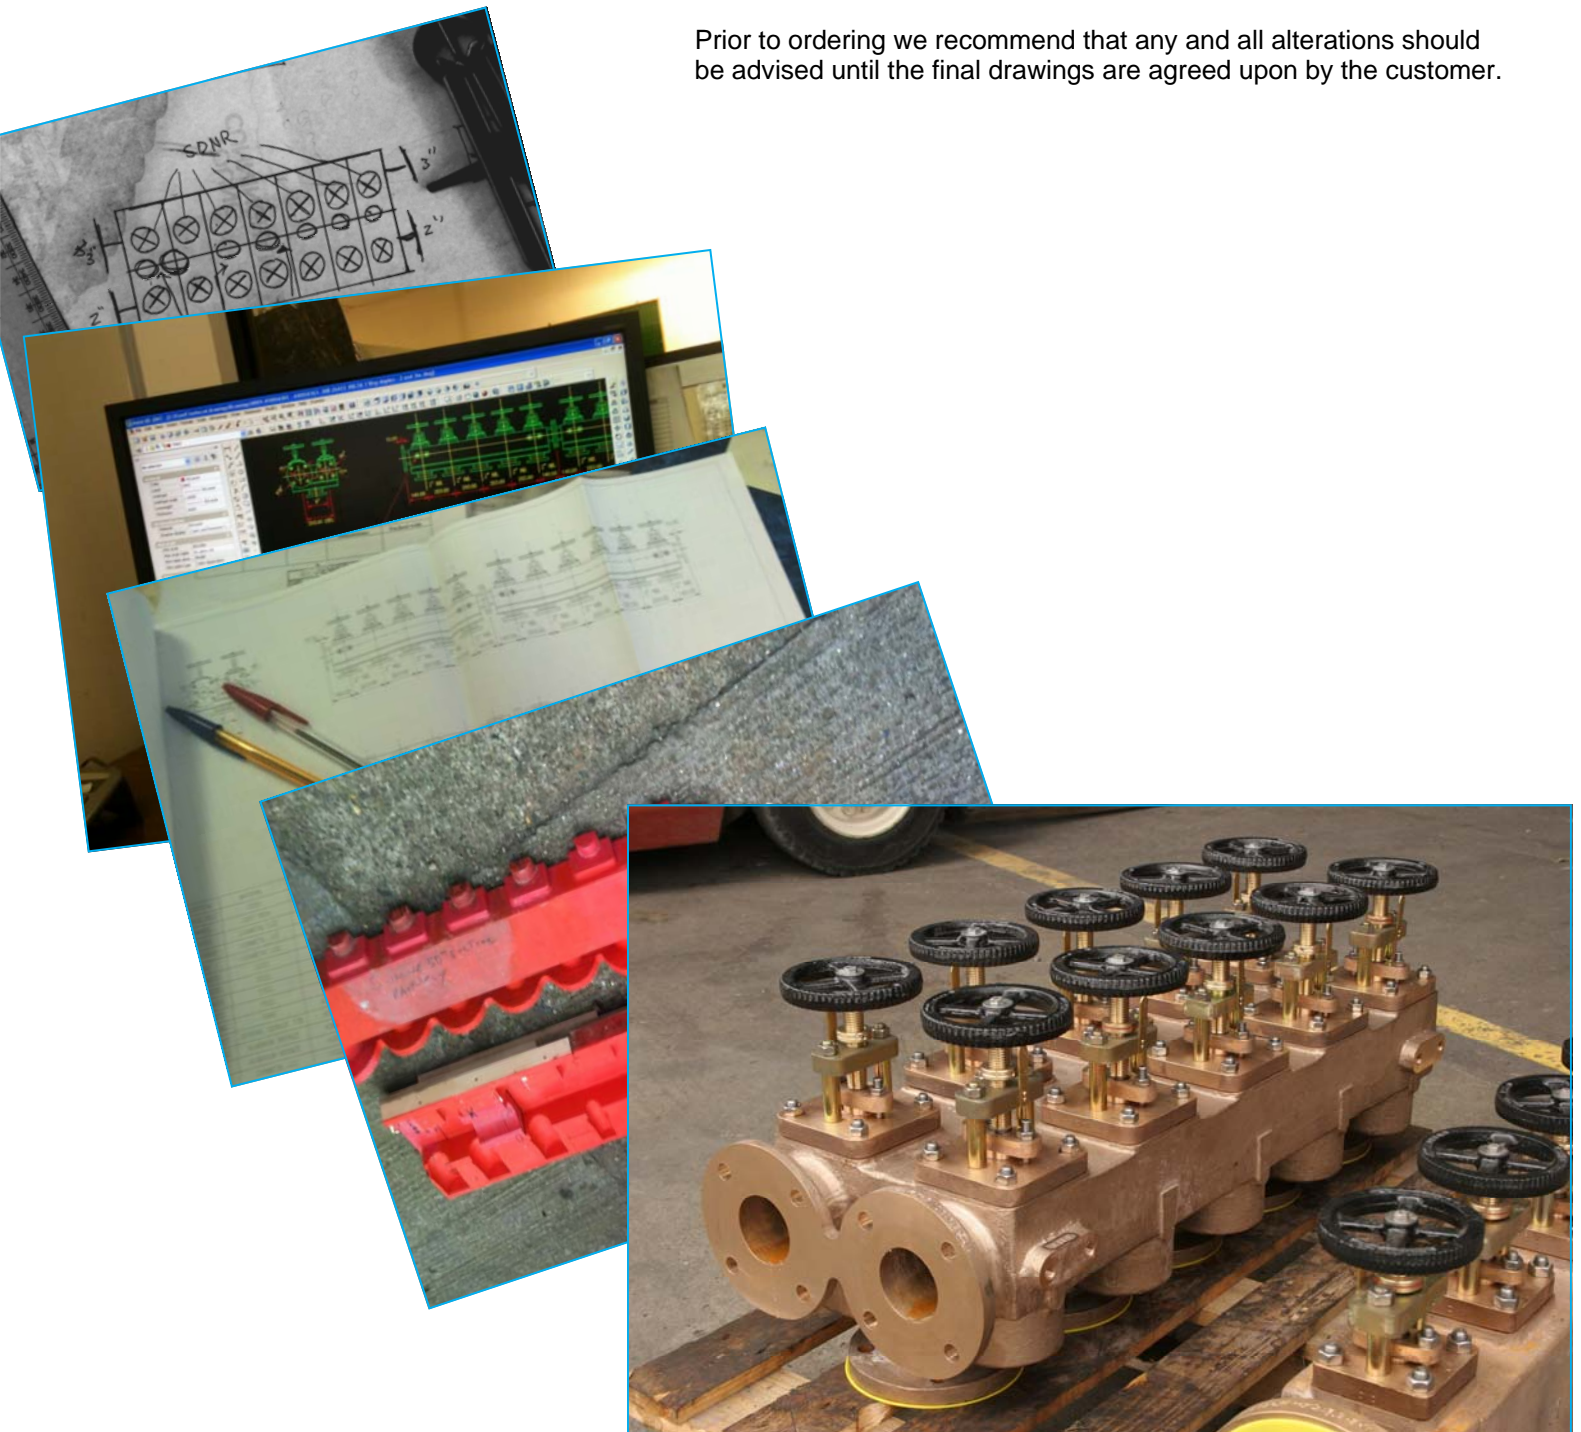

Our flanges are available in all current standards from B.S, ASA/ANSI, and JIS standards.

“Description, Drawing, Pattern, Production.”

To enable us to submit a quotation a simple line sketch is all that's required or if this is not an option a full description of the item will suffice.

Attached to our price quotation to the customer, will be a full drawing of our interpretation of the final arrangement set out as per the original requirements, giving the customer a better look at the final product and all dimensions required for pipe fittings.

Prior to ordering we recommend that any and all alterations should be advised until the final drawings are agreed upon by the customer.
