

# Get free connection rods with your next service set update

Limited-time service offer to help us make your compressor more sustainable

As part of our company-wide commitment to sustainability, we have replaced our old lead-containing white metal bearings with a new metal polymer bearing solution.

To install this new bearing type, you will need to replace the connection rods on your Sabroe SMC Compressor. To help with this, for a limited time, we are delivering new connection rods free of charge when you purchase our Service Set B or C.

## Why this matters

These new bearings will make your compressor more sustainable.

However, mixing old connection rods with the new bearings is not possible, as the new bearings have a smaller outside diameter. Incorrect installation may cause low oil pressure and bearing rotation inside the rod.

## What to do next

Simply provide the serial number and the running hours of your compressor to help us recommend the correct service set.
